Purchase

Net profit: 13.13 USD | Return 131.3%

How to Take the Position

This is Volatility 10 Index Price Table

6,732.586

6,732.586

In the strategy, you will focus only on the Digits which is the evolution of the price.(Numbers after Decimal Point).

6,732.586

The **First** of the 3 numbers that will give the signal.

Here is how,

You just need to have 1 digit that repeats 2 times in the progress of the prices evolution.

Ex.

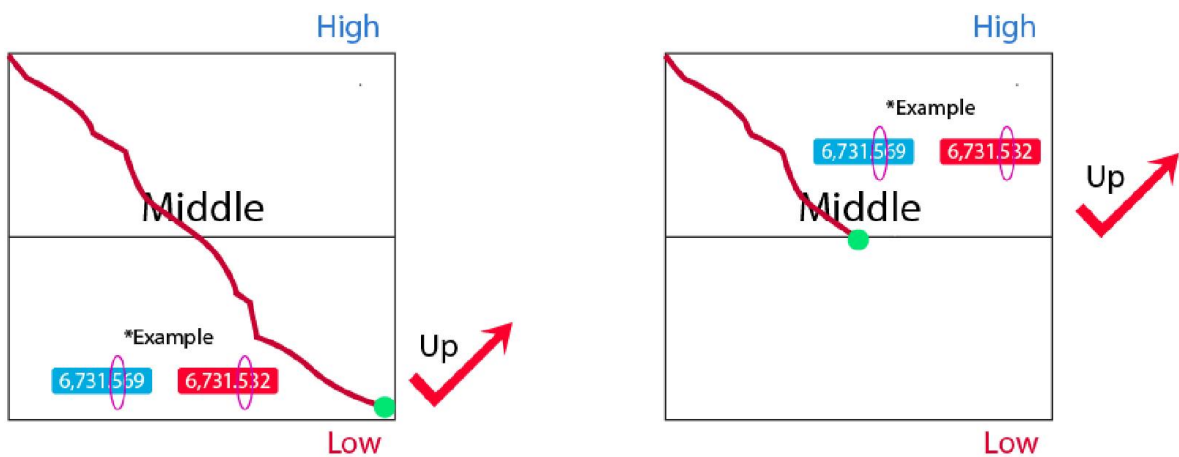

6,732.711

6,732.723

HERE HOW IT WORKS.

Touch Towards Upper Side

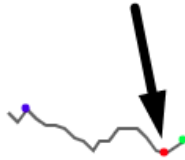

If you spot the Same digit (The First Number After Decimal Point)
2 times, Take position Touch towards up.

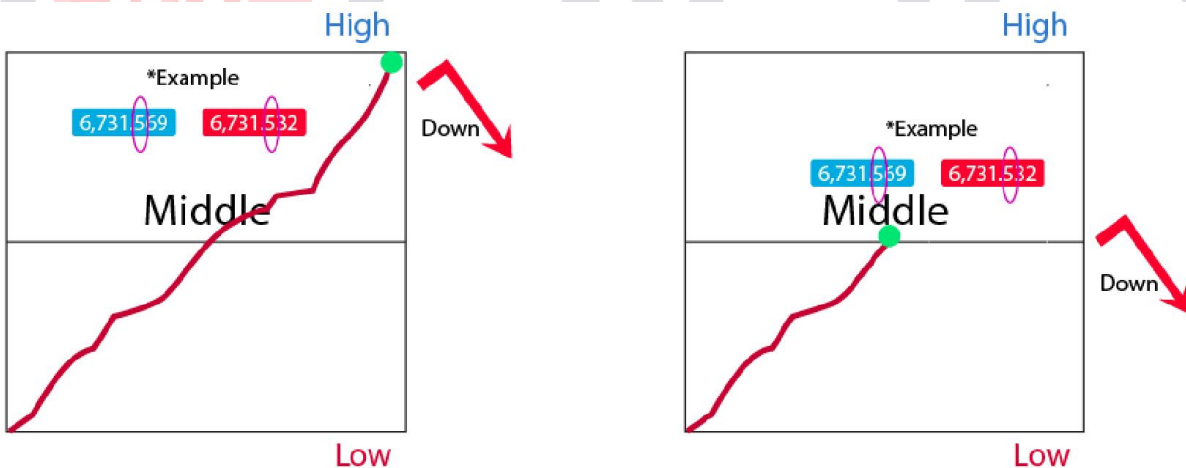

**** Make sure you have set Barrier Offset Plus (+)**

***Check the movement of the worm. Because this should happen middle or lower area of the Worm chart.**

*Better to take the Trade Once the **Red Dot** Appears.*

Touch Towards Down Side

If you spot the Same digit (The First Number After Decimal Point)
2 times, Take position Touch Towards down.

**** Make sure you have set Barrier Offset Minus (-)**

*Better to take the Trade Once the **Blue Dot** Appears.*

*Check the movement of the worm. Because, this should happen middle or Higher area of the Worm chart.

Things to Remember

- Maximum Trades Per Day is 6, do not exceed these limits.
- Take One trade in one Minute. Do not take more than 1 trade within a minute.
- Do Not Panic If You Loose. When you're panic, you're going to make a lot of mistakes. Stay calm and wait 15 minutes before taking another position.
- Do not Use this strategy back-to-back to avoid from getting traced. Mix this strategy with your other strategies, then trade. Best Practice is to take maximum 2 trade at a time. Then, better to move another strategy, and come again to this strategy after using another 3-4 strategies.
- See my Example video included in this folder to understand further.
